(User Pcmac) I like it because I don't have TV or Wi-Fi at home, just data and I go to the library to download movies and series. I'm having a problem with it not loading completely. user) Great app By Aggressivegamer360 (User Pcmac) Now I can watch many movies like pulp fiction. Some Bugs By Boy man son (User Pcmac) It's a great app, but there are some minor bugs that are easy to fix, like if you play a movie at max psu, it will play something other than the actual movie. Just a suggestion by TheCrayZ1 (Pcmac user) Thanks for the app, but can you give the video player the ability to fast forward 10 seconds? Or enable fast forward by swiping the screen. You can also control brightness and volume by swiping up or down from the corners of the screen. Please do this before Apple removes the app, because let's assume they will sooner or later. Thank you! Edit: I know I'm asking too much, but could you make the app remember where you left off in the video? Like the Netflix and Amazon apps. Edit: Thanks guys, added gestures. Now I don't have to use UC browser. JavaScript is not enabled. Please change your browser settings.
